| | ontro | ol.itemtemplate(v= | vs.110).aspx | | | |

二.实验步骤

1. 先写好 Adaptive UI

```
< ListView x:Name="ToDoListView" Grid.Column="0" IsItemClickEnabled="True
   ItemsSource="{x:Bind ViewModel.AllItems}">
  <ListView.ItemTemplate>
    <DataTemplate x:DataType="md:TodoItem">
      <UserControl>
         <Grid Height="100">
           < VisualStateManager. VisualStateGroups >
             <VisualStateGroup>
                <VisualState x:Name="minWidth1">
                  < VisualState.StateTriggers >
                     <AdaptiveTrigger MinWindowWidth="1"/>
                  </VisualState.StateTriggers>
                  <VisualState.Setters>
                     <Setter Target="image.Visibility" Value="Collapsed"/>
                  </VisualState.Setters>
                </VisualState>
                <VisualState x:Name="minWidth510">
                  <VisualState.StateTriggers>
                     <AdaptiveTrigger MinWindowWidth="600"/>
                  </VisualState.StateTriggers>
```

2. 添加必要的按钮事件---此处添加了删除,更新,删除事件

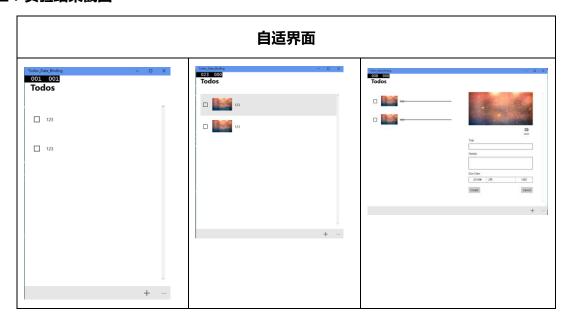

```
private void Todoltem_ItemClicked(object sender, ItemClickEventArgs e)
{
    ViewModel.SelectedItem = (Models.Todoltem)(e.ClickedItem);
    Frame.Navigate(typeof(NewPage), ViewModel);
}

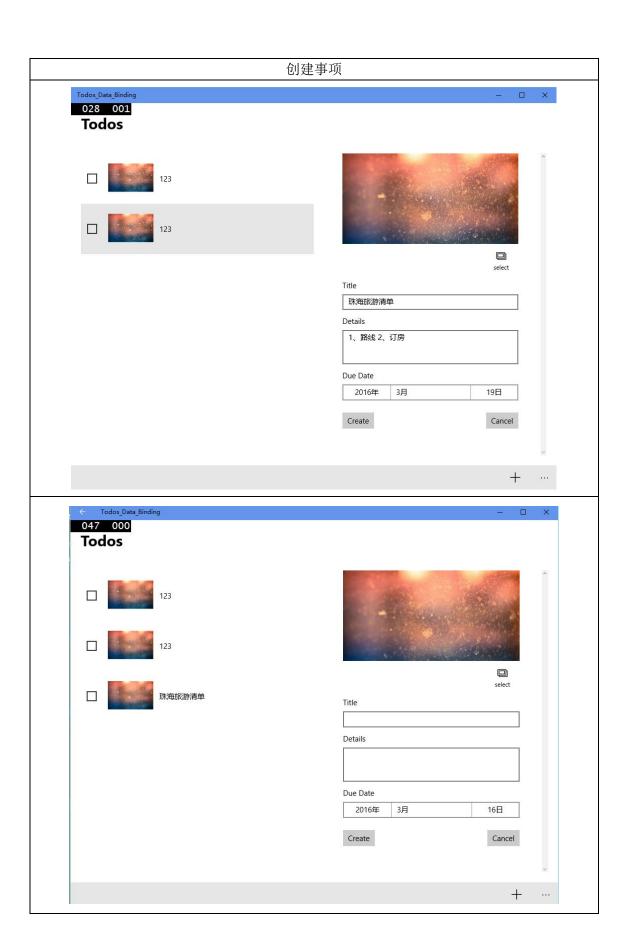

private void CreateButton_Clicked(object sender, RoutedEventArgs e)
{
    // check the textbox and datapicker
    // if ok
    bool isToCreate = true;

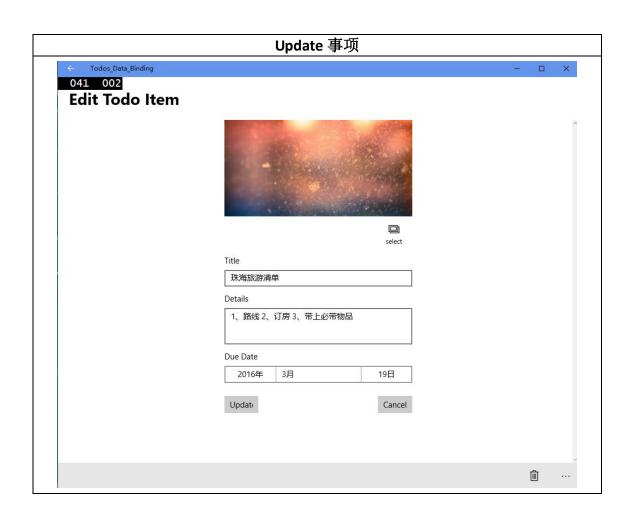

if (title.Text == "")
    {
        var inspire = new MessageDialog("标题不可以为空").ShowAsync();
        isToCreate = false;
    }
```

3. 实现跳转和数据绑定

三. 实验结果截图

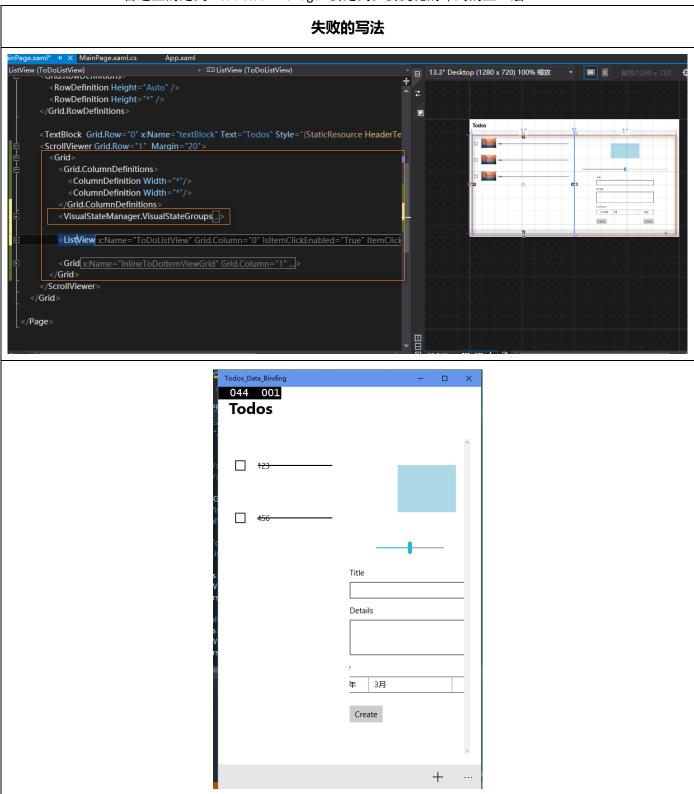

四.实验过程遇到的问题

● 自适应的定义 visualstatwManager 要定义在要变化的布局的上一层

成功的写法 回 13.3" Desktop (1280 x 720) 100% 缩放 ■ 有效:1280 x 720 < Grid Background = "{ThemeResource ApplicationPageBackgroundThemeBrush}"> Ιþ <Grid.RowDefinitions> <RowDefinition Height="Auto" /> <RowDefinition Height="*"/> </Grid.RowDefinitions> < Visual State Manager. Visual State Groups > <TextBlock Grid.Row="0" x:Name="extBlock" Text="Todos" Style="{StaticResource HeaderTe-<ScrollViewer Grid.Row="1" Margin ="20"> <Grid> <Grid.ColumnDefinitions> <ColumnDefinition Width="*"/> <ColumnDefinition Width="*"/> </Grid.ColumnDefinitions> <ListView x:Name="ToDoListView" Grid.Column="0" IsItemClickEnabled="True" ItemClick</p> < Grid x:Name="InlineToDoltemViewGrid" Grid.Column="1" ... > </Grid> </ScrollViewer> □ □ ☑ 29.31% • ******** ◎ ◆ ⑤ ◆ </Grid>

| 注 | 記 | 「下、現代操作系統应用开发 | week3 | 2016 - homework3 - demo2 | Todos | Todos | bin | x36 | Debug | App X | System. IO. dll " 。 已既过加载行号。模块进行了优化,并且调 「下、現代操作系統应用开发 | week3 | 2016 - homework3 - demo2 | Todos | Todos | bin | x366 | Debug | App X | System. Runtime Extensions. dll " 。 已既过加载符号。模块进 「下、現代操作系统应用开发 | week3 | 2016 - homework3 - demo2 | Todos | Todos | bin | x366 | Debug | App X | System. Reflection. dll " 。 模块进 「下、現代操作系统应用开发 | week3 | 2016 - homework3 - demo2 | Todos | Todos | App X | System. Reflection. Fytensions. dll " 。 模块立立由,不包含的

五.思考与总结

显示輸出来源(S): 调试 "Todos.exe"(CoreCLR: CoreCLR_UWF_Domain): "Todos.exe"(CoreCLR: CoreCLR_UWF_Domain): "Todos.exe"(CoreCLR: CoreCLR_UWF_Domain):

- 课上讲的内容比较概括,还是要多靠课下自行搜索资料
- 通过这次实验,感受了一下一种新的设计模式 MVVM,比较新颖
